

FIREWALLS AND VIRUS SCANS WON'T KEEP MOTHER NATURE FROM STEALING YOUR DATA!

Simple, Secure and Reliable Online Backup and Recovery

Your club's data is an integral part of your daily operations and should be protected as such. From billing to client services, this information is critical and would cause extreme difficulties for both you and your members if compromised or lost. Until recently, many clubs have relied upon an antiquated tape backup system which required manual off-site delivery and storage. At Jonas we feel that you should enjoy peace of mind knowing that in the event of localized data loss your valuable business data is 100% safe and secure - *Jonas E-Backup Services*.

Features	Benefits
Highly Secure	Data is encrypted prior to leaving your club and stays that way while hosted in our off-site data vault. This data requires specific procedures to be accessed and can only be done from your location.
Fully Automated Disaster Recovery	The Jonas e-backup " <i>set-and-forget</i> " functionality provides automated scheduled backups without any intervention.
Extremely Reliable	Unlike traditional tape backups which average a 35% failure rate, our e-backup technology only writes the changed information, minimizing potential loss of data between runs.
Peace of Mind	After every backup the system will generate an email notifying designated individuals that the operation performed successfully. This information provides peace of mind that your business is now fully disaster recovery ready.
